The Barracuda offers standardized systems throughout the various sizes and configurations. The operating systems are all PLC-based and include a userfriendly control panel. Barracuda also features The power up/down spud systems with API rated winch drums for proper cable storage. A rear-kicking spud for dredge positioning and advancement comes standard in this model. Optional spud traveling carriages or two stern kicker spuds available upon request.

With the simple option of two front swing winches, the Barracuda can be two dredges in one. This option allows the dredge to be converted from swinging ladder mode to conventional and still remains portable. This feature alone has caught the eye of dredge contractors and has made the Barracuda one of the most desired dredges available!

General: all dredges feature a PLC based operating system, electro-proportional hydraulic circuits, hi-capacity service water system, in-line direct marine style transmission for dredge pump reduction, engineered for portability, Caterpillar engines and power up/down spud system. Detailed specifications available upon model determination.
